

APQC'S PROCESS CLASSIFICATION FRAMEWORK®

APQC's Process Classification Framework® (PCF) is a list of processes that organizations use to define work processes comprehensively and without redundancies. Beyond being just a list, the PCF serves as a tool to support benchmarking, manage content, and perform other important process management activities.

APQC's PCF is the most widely used process framework in the world with over 300K downloads since 2010.

Organizations use the PCF to:

- ◆ identify and prioritize improvement efforts,
- ◆ define and communicate accountability for business processes that need to be improved,
- ◆ benchmark internally and with other organizations,
- ◆ align IT rollouts and updates for similar processes across the organization,
- ◆ establish structure for measuring performance,
- ◆ understand dependencies and inter-connections across/between processes, and
- ◆ consolidate enterprise content and knowledge.

NEW EXCEL VERSIONS

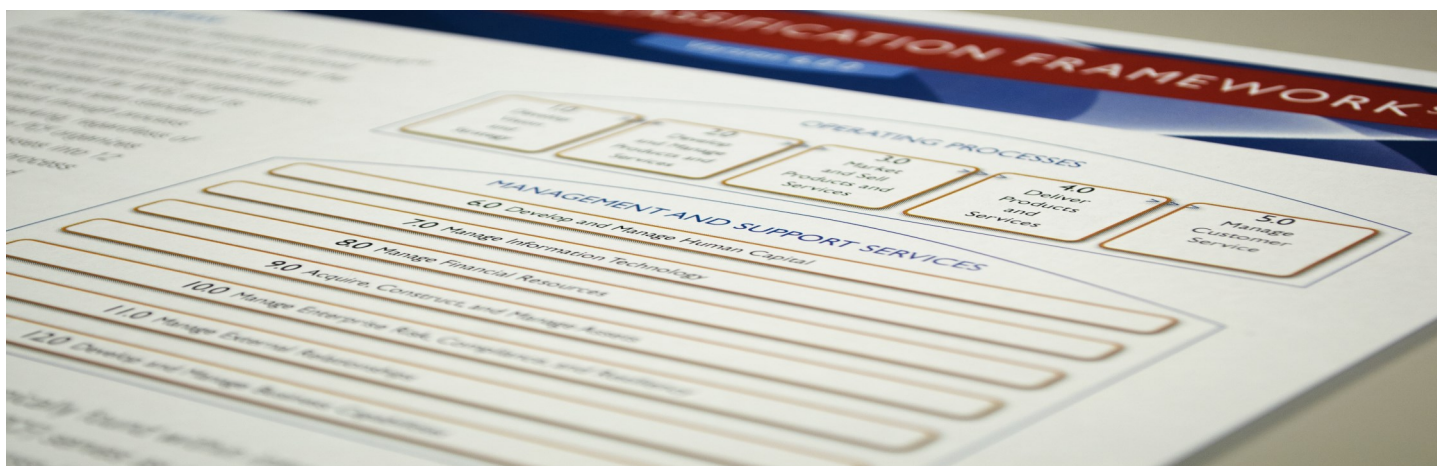

APQC now offers Excel versions of all PCFs. These versions will help you:

- ◆ accelerate the integration of the PCF into your systems, tools, and processes,
- ◆ quickly understand the scope of process elements with integrated definitions,
- ◆ identify performance assessment opportunities available through APQC's Open Standards BenchmarkingSM, and
- ◆ compare the most recent version of the PCF to its previous version (available to APQC members only).

Turn over for a list of all of the current industry-specific PCFs.

Download the cross-industry and all industry-specific PCFs at www.apqc.org/pcf.

APQC'S PROCESS CLASSIFICATION FRAMEWORK®
